B

EVOKING RELICS OF THE PAST AND
VISIONS OF THE FUTURE.

SYMMETRY AND BALANCE

The theme of symmetry and balance is central to the openworked movement design and open dial display.

With an overall height of 10.5mm, Vanguard takes full advantage of the volume within by creating layers of depth to be discovered.

ENGAGING TIME

The Vanguard Orb showcases its hand-finished flying tourbillon movement, giving the wearer the ability to switch between automatic and manual winding modes. All of this is housed within a sleek, symmetrical case that moves beyond the contemporary into truly uncharted territory.

Enhanced by coloured ceramic elements, the Orb adds a fresh visual and tactile dimension to its iconic design.

ORBITAL MASS

One of the most unique features of the Vanguard Orb is the sloped PVD-coated titanium track for the orbital oscillating mass.

Its curved track and concave structure are colour-matched to the ceramic elements using a high-precision micro-painting process inspired by the automotive industry. This approach achieves seamless, ceramic-like visual continuity without compromising technical performance.

When the user changes the mode of the watch from manual to automatic via the crown, the 2mm diamond-set orbital mass animates into existence and begins revolving around its track - appearing to float within the timepiece.

When the watch is changed back into manual mode, the diamond-set orbital mass is locked into place.

EXPERIENTIAL COMPLICATIONS

SPECIFICATIONS

- 1 In-house levitating flying tourbillon.
- 2 Orbital winding mass with decorative diamond set on titanium ring, counter-weight in gold
- 3 Function indicator operated by the crown
- 4 Superluminova hands and a pvd-coated titanium inner bezel with superluminova hour markers.

ADDITIONAL SPECIFICATIONS

- 60 hours of power reserve in manual mode
- 395 components
- Main plate and bridges in grade 5 titanium
- Finishes: Microblasted, satin-finished, block-polished and hand-beveled

VANGUART ORB

2026 CURRENT COLLECTION

PINK CERAMIC & TITANIUM

Case in titanium grade 5 and pink ceramic

Microblasted case with polished bevels

Open worked movement in titanium grade 5, microblasted finish, handmade polished bevels and satin finishing

Presented a pink rubber strap (Quick changing straps available in rubber and leather)

BLUE CERAMIC & ROSE GOLD

Case in rose gold and blue ceramic

Microblasted case with polished bevels

Open worked movement in titanium grade 5, microblasted finish, handmade polished bevels and satin finishing

Presented on a blue rubber strap (Quick changing straps available in rubber and leather)
